PROJECTS

Biterium AI

📅 2021

- Biteium AI is an app which helps people to monitor health and prevent cardiovascular diseases at an early stage. Users can describe clinical symptoms and lifestyle conditions and according to this information AI based smart digital assistant will suggest them personalized recommendations.

Emotions Are Georgia

📅 2019

- Emotions Are Georgia is a website for tourists who travel to Georgia. The main feature of the web platform is the option for users to generate their own guidebook of Georgia. After they give the website access to their Facebook information or answer some quick questions, the website analyzes their data and creates a custom guidebook based on their interests.

B Bot

📅 2018

- B Bot is a messenger chatbot created for an insurance company. It helps users to buy travel, medical, or auto insurance without leaving the chat. The chatbot uses natural language processing tools to analyze messages. B Bot currently has over 25,000 users.
